

SR2200 Black-Box Receiver

25 MHz - 3 GHz

Frequency stability +/- 1 ppm

High sensitivity & selectivity

PC control by USB or serial port

Discriminator OUT

10.7 MHz I.F. OUT

The SR2200 is a black-box wide band receiver intended for commercial / government applications.

Frequency range 25 MHz to 3 GHz. The receiver has no front panel and is controlled by connection to a computer via an RS232 serial or USB rear panel socket.

Although SR2200 is not supplied with any AOR control software (except a simple test utility), Liedtke GmbH's VisualRadio FALCON 8 FREE Edition is an excellent receiver control software which does now support our SR2200 Black Box receiver. WAN/LAN control with integrated client/server audio! ! Check it out at: http://www.visualradio.de/index_e.html
